SUMMARY

Senior SRE and backend developer with 15+ years of experience building and operating large-scale distributed systems, from OpenStack bare-metal fleets to cloud-native Kubernetes platforms. Passionate about open source, developer tooling, and elegant code — comfortable across the full stack from backend APIs to infrastructure automation.

EXPERIENCE

Symphony

2021 — Present

Senior Site Reliability Engineer

Built the customer onboarding platform combining a Python/FastAPI REST API with PostgreSQL persistence and Go-based Kubernetes operators (Red Hat Operator Framework), delivering full end-to-end infrastructure automation. Reduced customer onboarding from days to minutes and enabled on-demand test environment provisioning, replacing static configurations and accelerating CI/CD workflows. Designed and developed an AI-powered search relevancy tool leveraging semantic search and RAG techniques in Python.

Amadeus

2018 — 2021

Site Reliability Engineer

Engineered Ansible and Python automation tooling to repurpose and manage a fleet of 7,500 bare-metal servers across 15+ Red Hat OpenStack clusters, enabling cost-effective scaling of user-facing search infrastructure.

Airbus

2016 — 2018

Cloud Architect

Built scalable image processing infrastructure on OpenStack, optimised for high-throughput and compute-intensive workloads. Automated provisioning and configuration of clusters using Ansible and Python. Implemented CI/CD pipelines via GitLab CI to streamline delivery workflows and maintain operational reliability.

Object Libre

2012 — 2016

Software Engineer

Led the technical development of CloudKitty, an official OpenStack component for rating and billing, fully integrated within the OpenStack ecosystem. Oversaw architecture decisions, drove development best practices, and coordinated contributions in Python to deliver a production-grade, community-adopted open-source solution.

SKILLS & TECHNOLOGIES

Languages

Python Go SQL

Backend & Data

FastAPI PostgreSQL Redis RabbitMQ ElasticSearch

Infrastructure

Docker Kubernetes OpenStack AWS GCP Terraform Ansible Scaleway

CI/CD

Jenkins Circle CI GitLab CI

SELECTED PROJECTS

Search Relevancy Tool — Symphony

AI-powered search relevancy tool using semantic search and Retrieval-Augmented Generation (RAG) to enhance accuracy and contextual quality of search results across the platform.

Python FastAPI Transformers

Customer Onboarding Platform — Symphony

Developed the customer onboarding platform combining a Python/FastAPI REST API with PostgreSQL persistence and Go-based Kubernetes operators (Red Hat Operator Framework), delivering full end-to-end infrastructure automation. Reduced customer onboarding from days to minutes and enabled on-demand test environment provisioning, accelerating CI/CD workflows.

Python FastAPI PostgreSQL Go

Led development of CloudKitty, an official OpenStack rating and billing component. Production-grade, community-adopted open-source solution used across OpenStack deployments worldwide.
